

# SkimSAFE™

## FIPS-201 Approved Smart Card Shield

SkimSAFE is a FIPS-201 approved electro-magnetically opaque shield. It protects your valuable personal data from would-be skimmers and hackers by blocking information transmission to and from your contactless card.

Your card docks inside the SkimSAFE card holder, which blocks the flow of signals to and from the internal chip. When you are ready to use the card for access, simply slide it partially out.

SkimSAFE is available in two patent-pending form factors. Both are available in custom colors to fit your project needs.
